SOAPSTONES

NATURAL STONES

MAIN CHARACTERISTICS

ANTI-BACTERIAL:

Soapstone is recognized by the US Food and Drug Administration (FDA) as a suitable surface material for contact with food.

NON-POROUS:

Soapstone is bacteria resistant, it is also known as "anti-bacterial" since it does not absorb food or liquid, so any residue left on top of the stone can easily be cleaned away with just soap and water, and the residue will not be absorbed by the stone. Also soapstone does not need to be sealed with resin, unlike marble and granite. *Soapstone is recognized by the US Food and Drug Administration (FDA) as a suitable surface material for contact with food.*

HEAT RESISTANT

ACID RESISTANT

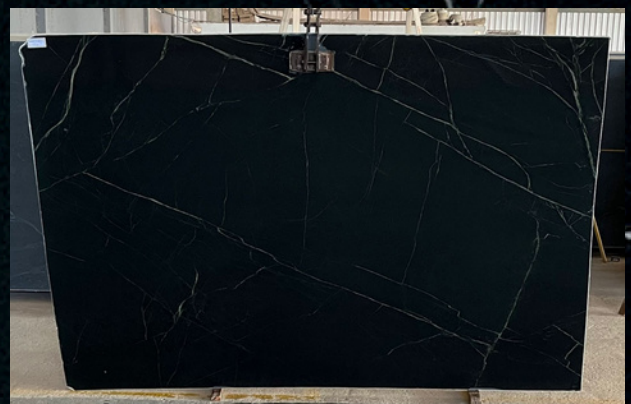

NO PROFESSIONAL REPAIRS:

100% NATURAL: Some people like the color and like to keep it that way, while others prefer to darken their soapstone surfaces. In order to maintain the stone natural coloring, no treatment is required, but if you prefer to darken, it can easily be done using just a natural dry wax or mineral oil.
